

1. Sensor Initialization

Every time after powering on the KAT Walk mini, first initialize the sensor on the device before using by manually rotating the supporting rods for one round.

Since the base frame adds height to ground level, set the ground level while on the device to 0cm as you would normally but your height settings should be 18.6cm less to compensate for the elevation.

2. Sensor Calibration

Sensor calibration is to correctly map your physical actions into the VR game or simulation.

① Click at KAT I/O and Steam VR.

② Make sure VR headset and back support face to the same direction.

③ Click on the "Calibration" button as shown on the menu.

3. Product Maintenance

- Before daily use, always wipe the base frame's surface to get rid of dust and dirt (if you use the wet towel to wipe it, please wait till it's dry)
- Routinely check the screws and bolts to ensure they are firmly tightened, parts that are prone to wear and tear for timely replacement e.g., the harness. In case of necessary component/part replacement, contact customer service to get help.

4. ONLY 3 Steps to Start Your VR Experience

STEP 1

Stepping on

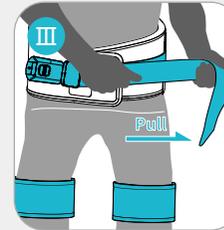

After putting on the special shoe covers, step onto the safety step and then the surface of the base frame by holding the handle of supporting rod.

STEP 2

Height Adjustment

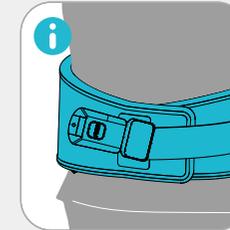

Adjust the height to your intended position by holding the harness and lifting it up or pressing it down. (keeping one hand to push on the height adjuster)

STEP 3

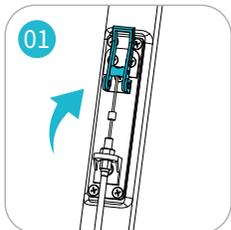

Harness Wearing

Wear the harness to guarantee there is no gap left, and pull the clasp belt of the harness, tightening it until reach the tightest and comfortable position.

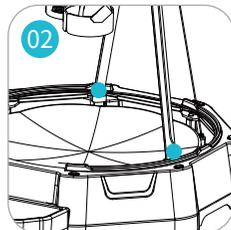

Make sure that the harness and clasp belt to be tightened to the tightest and there is no gap between the waist and the harness. If it's loosely worn, your VR experience will be affected.

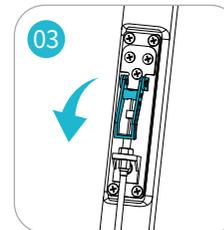

5. First Use Tutorials

Unlock the Rotation lock on the supporting rod.

Rotate the supporting rods to the position shown above.

Lock the Rotation lock to fasten the supporting rods.

Put on the special shoe covers.

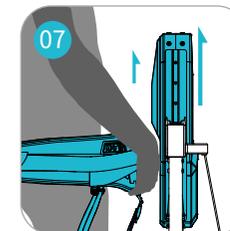

Fit your heel into the special shoe covers then fasten the buckle.

Hold firmly where the label indicates to step onto the surface of the base frame and stand facing the back support.

No.	Height range
1	1.85-1.95m
2	1.75-1.84m
3	1.60-1.74m
4	1.50-1.59m
5	1.40-1.49m

(the height range shown above is for illustration purposes only, and your comfort will be the ultimate reference.)

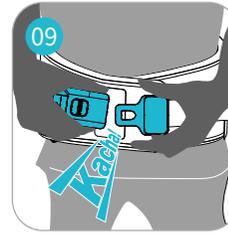

Lift the back of the harness, adjust it to a comfortable position on your waist and then slightly press it down to fix.

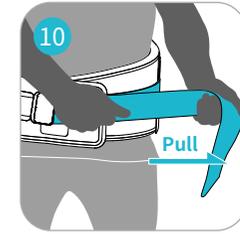

For lowering, slightly lift up the harness with both hands. And hold with one hand, push on the height adjuster to let the harness fall down to your intended position then gently press it down to fix it there.

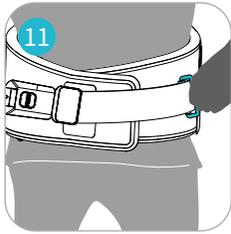

Lean closely against the inner side of the harness and pull both sides of the harness, closing the ring around the thinnest part of your waist (make sure both sides connect above your crotch). Then, stick the velcro as tight as you can to ensure there is no space left.

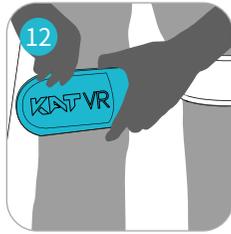

Buckle up the harness for safety.

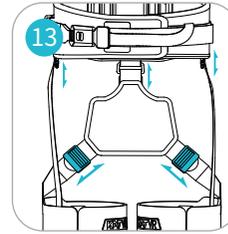

To tighten the harness, pull the left side of the harness with both hands until the adjustable belt is to the tightest. Meanwhile, fit your waist to the harness.

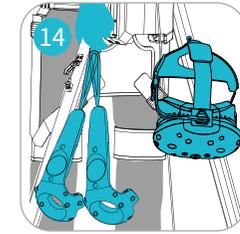

Pull the clasp belt, tightening it until reach the tightest comfortable position, and fasten the remaining part of the belt.

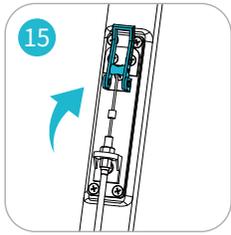

As to the leg straps, tighten the velcro around your thigh, ensuring there is no space left.

Take advantage of the adjustable buckles behind and use them to adjust the length between the leg straps and seat to your comfortable position.

Hang your VR headset and controller on the hooks behind the back support for easy access while on the device.

Unlock the Rotation lock.

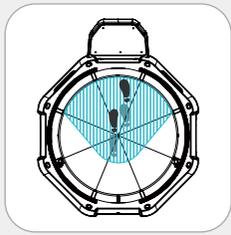

Game on.

6. Disassembly Procedure

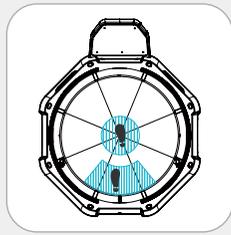

If you need to move the KAT Walk mini, strictly follow the product's assembly instructions in the reverse order. Disassemble with caution to keep the main components intact.

After dismantling the device, gently place it in its original box and use similar material to package it. Use sufficient manpower or a good logistics company to handle with care, otherwise the product may be prone to damage.

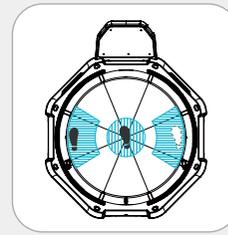

7. Walking Tutorials

To advance with the in-game character, keep shifting your steps back and forth.

To keep retreating with the in-game character, firmly stand with one foot in the center and take one step back with the other.

To keep strafing left or right, stand with one foot in the center and keep the other foot on the left or right; if take only one step leftward or rightward, stand with one foot in the center and take one step to the left or right.
